ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

Lunatic Asylum of Georgia.

FOR THE FISCAL YEAR ENDING

SEPTEMBER 1ST, 1896.

To His Excellency, W. Y. ATKINSON, Governor of Georgia:

The Board of Trustees of the Lunatic Asylum of Georgia has the honor to present to your Excellency this, its Annual Report, for the fiscal year ending September 1st, 1896.

Since our last report the new building for whites has been completed. Its occupancy began in the early part of 1896. This building is used exclusively for males.

NUMBER OF INMATES.

By reference to Supt. Powell's Report, herewith presented, you will find that at the close of our fiscal year, Sept. 1st, 1895, there were in the Asylum 1,823 inmates. Whites, 1,243; colored, 580. During the fiscal year just closed 332 whites and 209 colored insane patients were received into the institution. Total reception of patients during the fiscal year, 541.

During the year there were discharged, removed, eloped and died 362 patients, leaving on hand Sept. 1st, 1896, 2,002 patients.

FINANCES.

AMOUNTS RECEIVED AND EXPENDED FOR ORDINARY MAIN	TENANC	E.
At the close of our fiscal year, Sept. 1st, 1895, we had on hand a balance amounting to		60
year	223,333	66
\$	234,649	88
Of which amount we have expended \$226,868 78, as follows:		

1896—August 31st—By	subsistence\$	80,999	83
By	clothing	25,751	31
By	fuel and transportation	18,249	01
By	salaries	19,566	60
By	wages	55,266	45
Ву	incidental expenses	20,510	79
By	medical supplies	4,756	95
By	contingencies	909	24
By	stationery and postage	858	60

\$*226,868 78

(*For itemized statement of these expenditures we refer you to abstracts A, B, C, D, E, F, G, H, I and J, Steward Lamar's report.)

You will therefore see that notwithstanding the increased appropriation for support and maintenance the amount was inadequate by \$3,535 50, as shown by the fact that our surplus on hand, Sept. 1st, 1895, amounting to \$11,316 60, has been reduced to \$7,781 10.

This was caused by the largely increased number of patients. Your Board of Trustees would remind you that the institution has been managed with the utmost economy, compatible with the welfare of the inmates, and yet notwithstanding this fact and the further important one that provisions have been cheaper than at any time during the last fifty years, the amount appropriated was proven to be inadequate as shown by the inroad made upon our surplus fund.

This Board of Trustees requested the Legislature to appropriate \$240,000 00 for support and maintenance for the fiscal year 1896, but the Legislature appropriated only \$230,000 00 for this purpose. In the emergency upon us there was but one recourse, and that was to pay the deficit out of the surplus which this board necessarily carries from one year to another.

SPECIAL APPROPRIATIONS AND EXPENDITURES THEREOF.

By reference to Abstract "K" of Steward Lamar's report you will find that \$46,231 04, balance of the \$100,000 appropriated for enlargement of Asylum, was expended during the fiscal year just closed. Abstract "K" furnishes an itemized statement of expenditures of this fund.

BALANCE OF APPROPRIATION FOR DUPLICATE PUMP.

Abstract "L" of the Steward's report shows the balance on hand Sept.

1st, 1895, of the special appropriation for Duplicate Pump, and how this balance was expended.

SPECIAL APPROPRIATION FOR STEAM HEATING APPARATUS FOR DETACHED BUILDINGS.

Abstract "M" shows that \$5,552.00 was appropriated for this purpose during the last session of the Legislature. The report of the Steward gives the items showing how this fund was expended, and that we have on hand a balance amounting to \$976.77, which will be consumed in completing payments on the work.

SPECIAL APPROPRIATION FOR BUILDING BRICK WALL AROUND THE NEW BUILDING FOR WHITES.

Abstract "N" shows the special appropriation of \$6,000 made at the last session of the Legislature for erecting brick walls around the new building for whites. The Steward's report shows that \$5,397.29 of this fund has been paid out to the close of our fiscal year, leaving a balance amounting to \$602.71. All of this balance will be necessary to finish payment for work contracted for.

APPROPRIATIONS FOR SUPPORT AND MAINTENANCE FOR THE NEXT TWO YEARS.

By reference to the reports of Superintendent Powell and Steward Lamar you will find that these faithful and intelligent officers estimate that it will require the following amounts for support and maintenance for the next two years:

man-

We endorse these estimates and respectfully request appropriations above named for the next two years. The necessity is upon the State to provide for its unfortunate insane. Year by year the number increases, and there is no escape from the sacred duty of providing for this helpless portion of our population. Superintendent Powell and Steward Lamar are thoroughly qualified to form an intelligent opinion on this question and feel satisfied that it will be necessary for us to maintain 2,200 inmates in 1897 and 2,300 in 1898. The necessity stares us in the face, and we respectfully ask to be put in a financial condition adequate to meet it. Let us see what amount per diem will the above named sums allow to each insane patient. It will allow 35 cents a day per patient, or \$127.75 per annum. When we remember that 35 cents per diem per capita will be expended for food, clothing, washing, fuel, lights, cooking, furniture, crockery, nurses, physicians, medicines, burying the dead, paying the railroad fare of patients returned to their homes, repairs to buildings, replacing broken crockery and furniture, etc., it must be seen that only by the most rigid economy is such a work possible. It is all important that the Legislature in making appropriations to the Lunatic Asylum should remember that we start into our next fiscal year crippled by the severe loss entailed by death of almost all of our hogs from cholera and an almost total failure of our fall gardens. Then, too, it would be unreasonable to expect the present low prices of supplies to continue during the next two years. Again with increasing age of our large buildings, the expense for repairs will necessarily increase from year to year with the age of the structures.

In estimating the reasonableness of our request for an appropriation of 35 cents per capita per diem for support and maintenance we would call the attention of your Excellency to the fact that but very few lunatic asylums in America are supported within the amount asked for by your Board of Trustees.

We respectfully renew the following requests made in our last annua report:

SPECIAL APPROPRIATION FOR DUPLICATE AND ENLARGED WATER PIPES FROM PUMPING STATION TO WATER TOWER.

We heartily endorse the following from Engineer DeSaussure, and ask a special appropriation for this purpose amounting to \$4,700.

Hon. Board of Trustees, Milledgeville, Ga .:

GENTLEMEN—I beg to call your attention to the fact that the pipe through which water is pumped to the Asylum from our water works was laid when we had but eleven hundred patients. With the completion of the buildings now going up, the size of this Institution will be more than double what it was at that time.

To force the water through this old pipe in quantities necessary for the increased population requires the carrying of an increased water pressure; this means an excessive consumption of fuel.

I would respectfully ask that, if it meets with your approval, you take steps toward putting down a ten-inch pipe from the water pump at the creek to the water tower in the back court yard.

I estimate that the saving of fuel alone will amount to three hundred and twenty-five (\$325) dollars per year, not to mention the excessive wear on the water works, engine and boiler.

This pipe would also give us a duplicate line to pump through in the event of any accident to one of them. As you are aware, we have duplicate pumps and boilers, but no duplicate main.

This new pipe could be put in for four thousand seven hundred (\$4,700) dollars.

Respectfully,

T. H. DESAUSSURE,

Engineer.

The report of our Engineer will give you, in detail, the extensive and excellent work of the year in increasing our facilities for extinguishing a conflagration should it occur in any one of our buildings. If the duplicate and enlarged water main from pump at Camp Creek to tower in yard of centre building is constructed, as suggested above by the Engineer, our fire department will be in first-class position to promptly put out fires in any of our buildings. We would, however, remind you that unless this last suggested work be promptly done we are in imminent danger of our machinery proving inefficient at the moment when it will be most urgently needed. Our water supply is taken from Camp Creek, more than a mile

from our buildings. The water is forced into the tower by the pump at the creek. If at any time the strain upon this line of pipe be such as to break, even a single joint in it, the pump at the creek would be utterly useless until the pipe had been repaired. If a break occurred in this line during a fire in either of the buildings frightful disasters will of necessity result, for the reason that no water would be available with which to extinguish the fire. If the duplicate line of pipes were constructed we would be safe, for the reason that if a break occurred in one line of pipe the second one would supply the needful water. So that safety, as well as economy of maintenance, suggests the indispensable need of this duplicate line of

water pipes.

You should ever bear in mind the fact that conflagration is a constant menace to an insane asylum. Within the walls of every such institution are confined pyromaniacs, i. e.: persons who have uncontrollable impulses to fire buildings, and only by ceaseless vigilance can they be prevented from carrying into execution their insane cravings to set fire to the building giving them shelter. No matter how tireless the vigilance of the officials, the time finally arrives when one of these pyromaniacs finds an opportunity (and takes advantage of it) to apply the torch. How necessary, then, that an insane asylum, above all other public institutions, should have a perfect system for extinguishing fire. Appreciating the fact that conflagration is a constant menace to our Asylum, and knowing the calamitous results which would ensue among this helpless class of citizens, we seek your aid in placing our fire-fighting service upon the highest plane of efficiency.

During the year just closed, we have expended a large sum from our ordinary fund for support and maintenance in perfecting our fire-fighting service. We have also purchased a number of hand fire extinguishers, and shall purchase these machines from time to time until we shall have

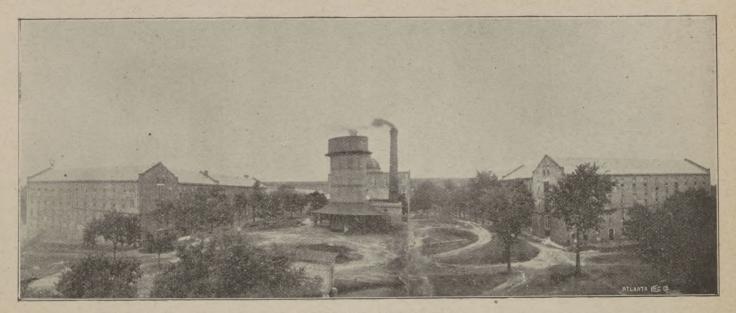

placed one in every ward in the institution.

AMENDMENT OF ACT OF 1889 ORGANIZING THE BOARD OF TRUSTEES.

We beg to call your Excellency's attention to the fact that the above specified Act provides only for paying the actual railroad fare of the members of the Board of Trustees going to and returning from the Asylum. The best interests of the Asylum require that oceasionally members of the Board should visit the Capitol on urgent business of this institution. They go solely in the interest of the State's institution, and it seems only just that their actual expenses in so visiting the Capitol, should be paid out of the Contingent Fund for travelling expenses of the Trustees, and we respectfully ask that the law be so amended. We would call your attention to the fact that while this fund is set apart to pay the travelling expenses of the Trustees, the full amount has never been drawn from the Treasury.

RECEPTION OF NON-RESIDENTS.

The law should be amended so as to allow the Trustees to receive temporarily into our Asylum insane citizens of other States found within

REAR VIEW OF MAIN BUILDING.

our borders. In some few instances, citizens of other States, while visiting our commonwealth, have suddenly become insane, and unaccompanied by

any friend or relative.

Humanity requires that these unfortunates should be promptly received into our Asylum or sent under guard to their homes. We have no fund available for this purpose, and we therefore ask that the law be so amended as to allow their commitment to our institution temporarily, or, if deemed best, that the Superintendent of the Asylum be allowed to expend the necessary money to send them home, and charge same to our ordinary appropriation for support and maintenance.

The report of our worthy and efficient Superintendent will give you in detail much information as to the work of our noble institution, and we

ask for it your careful study.

Steward Lamar's report gives an itemized statement of all the expenditures of the Asylum for the fiscal year. We beg to call the attention of the Legislature through you to the fact that a duplicate voucher for every purchase made during the year can be found in the Governor's office. These vouchers are furnished your Excellency monthly as required by law.

The Treasurer's report gives the financial status of the institution. The Assistant Steward's report will give you an insight into the farm-

ing operations of the year just closed.

The report of the Apothecary exhibits the work of his department. Engineer DeSaussure's report furnishes valuable information as to the

work of his department. The report of our excellent Matron shows in detail the work done in

The Chaplain's report shows the work of this worthy officer.

Your Board of Trustees would take this opportunity to commend the corps of officers of the Asylum for faithful and efficient discharge of duty.

Invoking the continued aid of your Excellency and that of the General Assembly in placing and maintaining the Georgia Lunatic Asylum on a plane with the best equipped Asylums in America, we have the honor to be very respectfully yours,

GEORGE A. CABANISS, President Board of Trustees.

EUGENE FOSTER, Secretary Board of Trustees.

Report of Superintendent Powell.

STATE LUNATIO ASYLUM, MILLEDGEVILLE, GA., September 1, 1896.

To the Honorable Board of Trustees, Georgia State Lunatic Asylum:

GENTLEMEN: -In obedience to the requirements of the law and rules of the institution I have the honor herewith to submit for your consideration the following report of this institution, beginning September 1, 1895, and

ending September 1, 1896, together with the reports of the Steward and Treasurer and other officers, giving a full and detailed statement of its operations in its every department, and showing the amount of provisions, clothing, bedding, drugs, and indeed, everything purchased, from whom, price paid, and aggregate cost. Also the movement of its population, with such suggestions as I may think advisable or beneficial in conducting the affairs of the institution.

On the first of September, 1895, there were white patients on hand 1,243, and colored 580, making a total of 1,823. There have been received since 332 whites and 209 colored, making a total reception of 541.

There have been discharged, removed, eloped, and died during the year 362, leaving on hand September 1, 1896, 2,002, of whom there are sixty-one whites and three colored on furlough, not discharged.

The average number of patients under treatment during the year was 1,912, while the total number receiving treatment was 2,364. It will be seen that the average number receiving treatment this year was 129 more than last year. We have 179 more patients on hand than at the close of last year.

The following tables will give in detail the movement of both white and colored population:

HEALTH.

The general health of the institution during the past year has been as good as we could reasonably expect when we consider the age, and mental and physical condition of those received during the year.

We have been exempt from all epidemic diseases save a few cases of measles, which by prompt isolation and hygenic measures, prevented a general spread of the disease throughout the institution, having only twelve or fifteen cases among the patients. We have also enjoyed immunity from casualties of every kind. Suicidal, homicidal and pyromania tendencies have been indicated in the histories and symptoms of many cases. With such tendencies, and no serious accident with so large a population, it clearly shows the faithfulness and untiring watchfulness on the part of those who have been charged with the care of 2,364 insane persons.

The ratio of death upon the number treated is 8 per cent. By reference to tables No. 6 and 12, giving the cause of death, it will be seen that the mortality has been principally in those cases suffering from organic or chronic mental diseases, and it will be seen that old age, consumption, chronic exhaustion, apoplexy, epilepsy, paralysis, heart disease, etc., are the leading causes of death.

RECOVERIES.

The per centage of recoveries on the number admitted during the year

is .31. This you will see is a little lower than last year, though it is fully up to the average of similar institutions.

The decrease is due to a large number of chronic and incurable cases received, which the records will show, and which I think can be readily

and satisfactorily explained.

When our new buildings were opened for the reception of patients many of the 541 received during the year, as you will see from tables No. 2 and 8, were cases of long standing and incurable, such cases as senile dementia, general paresis, dementia after epilepsy, dementia after chronic mania, dementia after melancholia, without the slightest hope of any favorable results from treatment. Indeed the poor-houses were simply emptied in upon us—apparently a desire on the part of many of the county authorities to get clear of all that were in any way an expense to the counties, regardless of age and physical condition.

The records will also show that quite a number lived only a few days, weeks, or months after reception; hence, from the above statement and the records of the institution, you will readily see that there was a difference in the class of patients received during the past year and that of

many years back.

Diage.

100

In regard to those removed, improved and furloughed, there are many cases that, after long restraint and regular habits obtained from hospital life, return home with good results. The enfeeblement of the mental integrity was in many cases improved to a considerable degree, and they were able in a measure to aid in their support and that of their families.

EMPLOYMENT AND AMUSEMENTS.

We have continued outdoor employment with quite a large number of male patients when the weather was suitable. They have done all the grading, sodding, etc., removing a large amount of earth around the new buildings, and much work has been done by them in the various departments of the institution; i. e., garden, dairy, laundry, handling of lumber, and keeping the yards and grounds in order.

The employment has been as varied as we could make it. Since the workshop for the employment of patients was built it has, up to this time, been used only for making mattresses. As you know, in occupying the

new buildings it required quite a large number.

All the sewing and mending for the entire institution has been done by the female patients, with such assistance as the attendants could give. Great improvement has been noticed in quite a number of those engaged in work, and in many cases that have recovered their recovery can be

attributed to pleasant employment.

Pleasant employment of mind and body, in my judgment, will ultimately be one of the leading features in all well managed hospitals for the insane. We hope every year to make our employments more varied and diversified so as to suit all cases. No one is forced to work, but all are encouraged to engage in some employment if their mental and physical condition will justify.

Weekly amusements have been continued throughout the year when

the weather was suitable, save during the epidemic of measles.

1 DEMACTION DEMATE DUITDING

9 1/mit MATE DODMINORY

2 INMEDIOD OF A DODMINODY

IMPROVEMENTS.

A very large amount of important repairs and improvements have been made during the year. The institution has grown far beyond the capacity of the laundry; hence, it was absolutely necessary to enlarge the laundry to meet the demands of the increased number of patients.

As the male patients were removed from the main or center building to the new building, to make room for the female patients, and as some of these buildings have been occupied for more than fifty years, repairs on

them were absolutely necessary.

Rooms for pathological work have been fitted up, and I found it necessary to fit up a new apothecary shop at a more central point so as to facili-

tate business, and give more room which was needed.

As your honorable body knows, the two old detached buildings, which were heated by air furnaces located in and under the wards, have been a constant source of apprehension as to the safety of the patients in the buildings from fire. The appropriation made by the last Legislasure has been expended, and these buildings will now be heated by steam.

It is unnecessary for me to say more in regard to improvements as the Engineer will, in his report, give a full and detailed account of all improve-

ments.

FINANCES.

You will see from the report of our faithful Steward that the finances of the institution continue to be managed with the strictest economy considering the welfare of the patients, and the necessary preservation of this large property, and his books will show that both have been properly cared for. The per capita per diem of the past twelve months has been 32.42.

ESTIMATED AMOUNT FOR SUPPORT AND MAINTENANCE FOR 1897 AND 1898.

The estimated amount by the Steward for the support and maintenance of the institution for the year 1897 is \$280,000, based on an average number of 2,200 patients, and for 1898, \$290,000, on an average number of 2,300 patients. This estimate, as you will see, is calculated upon a per capita per diem of .35, which, in my judgment, is as low as can be to do justice to our unfortunate charges, and keep up the necessary repairs, etc., of the institution.

ASSISTANT STEWARD.

By reference to the Assistant Steward's report, you will see the results of the garden and dairy, and the amount of pork raised. The clear profits of this department for the year, over all expenses, is \$8,399.48. This is an increase over last year's profits of \$1,673.44. This is very satisfactory.

I am sorry to say that from the long continued drouth, the latter part of the season, we will have but few winter vegetables, I fear. Collards, turnips and sweet potatoes are our principal winter vegetables. The outlook now is that the potato crop will be very short, and it is doubtful as to

whether we will have any turnips or collards at all, which will be a calamity as we cannot buy them around us in sufficient quantities to supply our needs.

We have also to report a fatal epidemic of hog cholera among our hogs. One hundred and seventy-two have died from it, and they are still dying. We have tried all of the known remedies, and consulted with those who are supposed to be, or claim to be, skilled in the treatment of the disease, with apparently no benefit. This is a very serious loss indeed to us.

STOREKEEPER.

By reference to the report of the Storekeeper you will find a full account of the conduct and management of that department.

ENGINEER.

By reference to the report of the Engineer you will find a detailed account of all improvements during the year.

MATRON.

The report of our efficient Matron will give a full and complete account of the work done in her department.

APOTHECARY.

The report of the Apothecary gives an itemized statement of the work done in that department, the number of prescriptions filled, and the amount of drugs and instruments on hand.

PATHOLOGICAL LABORATORY.

The Pathologist has shown an intelligent and commendable application to the work which I am sure will bring forth gratifying results. The work of this department I regard as indispensable to the institution. It is an important aid in diagnosing, giving a clear knowledge of what would otherwise be obscure, thereby enabling us to treat the cases intelligently.

By reference to his report you will see what amount of work has been done in that department, and the equipment of the laboratory. I would recommend an additional room or rooms for photographic purposes.

TRAINING SCHOOL.

The training school for female attendants has been in operation in this institution five months, and I am thoroughly satisfied that a well organized training school will result in great benefit to patients under their care, and shall endeavor to establish one during the year for male attendants.

LIBRARIAN.

The report of the Librarian will show the donations of the year, and the number of books, periodicals, etc., now in the library.

We are under renewed obligations to many friends for their generous donations of books, periodicals, etc., which have added greatly to the pleasure and comfort of our patients, and for many other manifestations of interest in their welfare and happiness.

RELIGIOUS SERVICES.

Religious services have been held regularly on Thursday and Sunday afternoons during the year—save during the epidemic of measles—by our efficient Chaplain, Rev. D. W. Brannen, and the patients look forward to the services with pleasure. The attendance has usually been large, and the conduct remarkably good. Our Chaplain has buried the dead and visited the sick when advisable.

CONCLUSION.

I sincerely thank all officers, attendants and employes who have aided in any way in advancing the interests of the institution, and the welfare of the patients.

I am profoundly grateful to your honorable body for your continued assistance to me, and your wise counsel in the discharge of my duties. Trusting in the guidance of a wise and merciful Providence, I am,

Very respectfully,

T. O. POWELL, Superintendent, etc.

Report of Pathologist.

STATE LUNATIC ASYLUM,
MILLEDGEVILLE, GA., August 31st, 1896.

DR. T. O. POWELL, Superintendent:

DEAR SIR-I have the honor to submit, for your consideration, this

my report as Pathologist:

The department being a new one it has, of course, been necessary to begin from the very foundation. Considerable has already been accomplished towards the establishment of suitable quarters.

The room chosen is central in location, convenient for the purpose and well lighted. Water and gas fixtures have been put in place, and several

of the necessary tables provided.

Laboratory apparatus as follows has been purchased:

1 incubator. 1 copper still. 1 centrifugal machine.
1 sterilizer, hot air. 1 microtome. Chemicals.
1 sterilizer steam. 1 microtome knife. Stains.

1 sterilizer, steam. 1 microtome knife. Stains.
1 hot water funnel. 2 pairs of scales. Glassware, etc., etc.

Besides the above there is the following apparatus belonging to myself:

1 microscope, large. Post mortem instru-1 microscope, small. Post mortem instru-Stains.

1 water bath. 1 haemacytometer. Glassware, etc., etc.

2 microtome knives. 2 hones.

Together the above represents a very good equipment for the present needs, with the exception of an addition to the stock of chemicals and glassware.

Not a great deal in the way of microscopical investigation has been accomplished as yet. This is owing to the fact that much time has been consumed in equipping the laboratory and setting the apparatus in order. It is but recently that a microtome has been obtained, and without this no tissue work could be done.

On the other hand a considerable amount of clinical work has been done, and though yet incomplete, the laboratory is in very fair running

Up to and including this date fifteen necropsies have been made. The subjects were all negroes and the appended table shows the conclusions reached as to the cause of death in each case. It will be seen at a glance that 60 per cent. of the mortality was due to pulmonary tuberculosis. The cases were not selected ones, and this fact increases the gravity of the situation. It is true that subsequent investigations may lower the percentage of mortality from this cause, but it is not probable that the reduction will be material. Among the negro population of our institution the prevalence of this disease is alarmingly great.

TABULATED STATEMENT SHOWING CAUSE OF DEATH IN CASES UPON WHICH NECROPSIES HAVE BEEN MADE.

No.	NAME.	Sex.	AGE.	CAUSE OF DEATH.
1 2 3 4 5 6 7 8 9 0 1 2 3 4 5	M. H. A. C. H. W. A. C. B. M. S. R. H. W. C. S. A. A. J. M. W. S. H. P. S. Y. J. H. H. G.	Female "" "" "" "" Male "" Female	40 23 31 55 38 26 25 33 20 64 26 40 43 25 42	Chronic nephritis. Acute mil. tuberculosis. Pulmonary tuberculosis. Pulmonary tuberculosis Fatty degeneration of heart. Septic peritoritis. Pulmonary tuberculosis. Acute nephritis. Pulmonary tuberculosis. Chronic nephritis. Oedema of lungs. Pulmonary tuberculosis. Pulmonary tuberculosis. Pulmonary tuberculosis. Pulmonary tuberculosis. Pulmonary tuberculosis. Pulmonary tuberculosis.

I would call attention to the fact that suitable rooms for photographic . purposes are very desirable.

Photographic records of patients and pathological specimens will add much to the scientific value of the case to histories and render them of

As nearly all of the necessary apparatus is already in hand, being personal property of my own, very little expense will be attached to the fitting up of such a department. At a small cost a gallery could be erected adjoining the laboratory, and this location would probably be the best obtainable.

Respectfully,

T. E. OERTEL, Pathologist.

Steward's Report.

STATE LUNATIC ASYLUM, MILLEDGEVILLE, GA., August 31st, 1886.

DR. T. O. POWELL, Superintendent:

DEAR SIR-I have the honor to transmit, through you, to our Board of Trustees, this, my report as Steward, from September 1st, 1895, to September 1st, 1896:

Abstract "A" shows the balance brought forward from last fiscal year, the amount drawn from the State Treasurer for support and maintenance of the Institution, together with a classified statement of the disbursements; also the balance on hand to be carried forward to the next year.

Abstract "B" shows in detail the expenditures on account of subsist-

ence.

Abstract "C" shows in detail the expenditures on account of clothing. Abstract "D" shows in detail the expenditures on account of fuel and transportation.

Abstract "E" shows salaries paid to officers. Abstract "F" shows wages paid to employes.

Abstract "G" shows in detail the expenditures on account of incidental expenses.

Abstract "H" shows in detail the expenditures on account of medical

supplies.

Abstract "I" shows in detail the expenditures on account of contin-

Abstract "J" shows in detail the expenditures on account of stationery

and postage.

Abstract "K" shows in detail the expenditures of the balance of the special appropriation on hand last year for enlarging the Institution, together with the amounts drawn from State Treasurer on said appropria-

Abstract "L" shows the expenditures of the balance on hand last year

for duplicating pump.

Abstract "M" shows in detail the expenditures of special appropriation for heating detached buildings, together with balance on hand carried forward to next year.

Abstract "N" shows in detail the expenditures on account of special appropriation for building brick wall, together with the balance on hand

carried forward to next year.

Abstract "O" shows the requisitions for support and maintenance of the Institution drawn from the State Treasurer in their regular order.

Abstract "P" shows the average number of patients from 1873 to 1896, both included, together with the per capita, per diem and per annum.

Abstract "Q" shows the cost of maintaining one patient by the year, month, week and day.

Our Storekeeper, Mr. W. H. Hunter, reports stock on hand, \$7,970.71.

1. 14TH MALE DORMITORY.

2. DETACHED MALE BUILDING.

3. GAS WORKS.

Our Apothecary, Dr. A. G. North, reports stock on hand, \$778.60.

Our per capita is $32\frac{42}{100}$ c.

By reference to the report of Mr. G. W. Hollingshead, you will find the

results from garden, dairy, hogs, etc.

Since we opened the new building the number of inmates has steadily increased, and will continue to do so. I would suggest an appropriation of \$280,000 for 1897, based on an average number of 2,200 patients, and \$290,000 for 1898, for an average number of patients of 2,300. This estimate is calculated on a per capita per diem of 35 cents, which is as low as can reasonably be expected that we should get through on.

I have devoted, as required by the rules, my entire time to the Steward's work, and have discharged to the best of my ability the duties required of me. I feel very grateful for the continued confidence of our

Board of Trustees, as well as that of yourself. I am,

Very respectfully,

LUCIUS J. LAMAR, Steward.

ATTEST:

H. S. JONES,

Notary Public, Baldwin County, Ga.

PRIVATE DEPOSIT ACCOUNT.

There is a private deposit fund sent by relatives, guardians, etc., of inmates for supplying them with little extras (such things as are not furnished by the State), which amounts to cash on hand now, \$1,094.75. Of this fund \$522.68 belongs to female patients and \$572.07 belongs to male patients.

Report of Assistant Steward.

STATE LUNATIC ASYLUM, MILLEDGEVILLE, GA., September 1st, 1886.

MR. L. J. LAMAR, Steward:

DEAR SIR—I herewith hand you my report as Assistant Steward for the year beginning September 1st, 1895, and ending with August 31st, 1896, of dairy, garden, and pork; also statement of stock, wagons, etc., on hand September 1st, 1896. We have lost, from February 8th to August 21st, inclusive, one hundred and seventy-two head of hogs from cholera, also four cows from unknown cause. Our prospect for winter vegetables, sweet potatoes, etc., is very poor indeed, on account of continued dry weather.

Very respectfully,
GEORGE W. HOLLENSHEAD,
Assistant Steward.

Report of Engineer.

STATE LUNATIO ASYLUM, MILLEDGEVILLE, GA., September 1, 1896.

DR. T. O. POWELL, Superintendent, etc.:

SIR—I have the honor to submit herewith my Annual Report of the workings of this department.

Respectfully,

T. H. DESAUSSURE, Engineer.

IMPROVEMENTS.

The legislature of 1895 made a special appropriation for the purpose of putting yard walls about the new building for patients; of this wall there has been built eight hundred and eighteen (818) lineal feet, thirteen feet

high, and eight hundred and ninety-seven lineal feet, ten feet high. There still remains a small portion of wall in front of the building yet to be laid.

To make a suitable work room for the pathologist, we have taken that part of the chapel for the dead situated on the west side of the central hall way and fitted it up as a laborotory, putting in cupboards, shelving, sinks, hot and cold water and gas. The central hallway has been converted into a chapel by enclosing the south end with glass and putting in a glass door at the north end.

In moving the male patients from the male wings of the main building, where each ward had a separate dining room, to the new building, where there are three congregate dining halls, it was found necessary to make an entire new set of dining tables, fifty-eight in number, that space be economised and a uniform appearance be presented.

It has been found advisable to move the apothecary department from the residence portion of the male convalescents' building to the more commodious quarters in the new building. These quarters are not only more convenient than the old, but they are in a more central position and afford greater facilities for the transaction of business. New shelving, cupboards, and a prescription stand have been put in, the old shelving being used in part in fitting up the new compounding room, which has been added to this department.

The two detached buildings have for years past been heated by means of hot-air furnaces located under the wards. These have always been costly in maintenance and in fuel, and have been a constant source of danger to the buildings and inmates from fire. The special appropriation made by the Legislature at its last session for putting a steam-heating plant in these buildings has been used toward that end, and the work is well under way, and will be completed before cold weather begins. It was found necessary to build an entirely new boiler-room and chimney for the boiler for this heating apparatus. This boiler-room and chimney have been made large enough to accommodate the boiler supplying steam for the laundry, machine shop, and dry kilns, in order that both boilers may be in one house and under the care of one man. This boiler has been taken out of the old room and placed in the new one, thus vacating a room twenty-two by twenty-eight feet. This old boiler room is in precisely the most desirable position, as regards the laundry, for use as a room for soiled clothes; and it will be used as such, and fitted with bins, etc., for the reception of clothes as they come from the several wards

During the past year the space between the original laundry building and the old boiler room has been built up with brick walls on sides and one end, and roofed over, thus enlarging the wash room of that department by a floor space of thirty by sixty feet. This space, as well as the old wash room (22x45 feet), and the ironing room (22x45 feet), has been paved with pressed tile, laid in cement. Three new all brass washing machines have been added to this department, and all of the machinery moved into the annex, giving proper space for the handling and sorting of the clothes before they are distributed to the several wards. A twenty-five-gallon copper steam-jacketed starch kettle and a fifty-gallon copper steam-jacketed soap kettle have been purchased and put in service. The soap kettle will

be an especial saving to the institution, doing away, as it does, with the services of one woman, and the expense attending the burning of wood under an open kettle, as was formerly done in makins soft or lye soap.

Much earth has been moved from the front of the new building by patients working under the care of attendants, and the work of beautifying the grounds is progressing as fast as can be done with this help. Terraces have been thrown up and the banks sodded. The terrace bank in front of the building for female convalescents has been sodded also, and presents a much more attractive appearance.

Some of the wards vacated by the male patients when they were moved into the new building are of the oldest of the institution, and were

needing a genaral overhauling badly.

A great deal of this work has been done. On the seventh ward the plastering has been chopped and a slip coat of lime, putty and plaster of paris put on. On the eighth and ninth wards it was found cecessary to knock all of the plastering off and put on new. A great deal of the wood-work has been replaced, new floors laid, and new sash put in, and eleven wards have thus been patched, whitewashed and painted. Much of the plumbing on these wards was in need of repair; this has been done. New pipes, both for hot and cold water, and also soil pipes, have been put in. A new bath tub has also been put on the first ward.

Besides doing a large amount of ordinary repair work necessary about the institution during the year, the carpenters have made the following:

8 window frames.

18 door frames.

1 double door frame.

5 gates.

6 boxes for pipe.

4 ladders.

125 dining tables.

8 tops for iron frame tables.

103 window sash.

4 panel doors.

8 pairs of steps.

1 platform for steps.

1 engine room floor.

1 porch floor.

2 room floors.

17 water closet floors.

3 portico floors.

1 hallway floor at chapel.

37 wire guards.

50 iron wire guards hung.

248 bedsteads.

49 lattice doors.

1 well curb.

1 Mortar box.

2 large double gates.

1 bolster.

2 cart bodies.

1 wagon body.

3 tables for sinks.

10 bake house paddles.

4 sets shelving.

16 water closet seats.

30 shuck mops.

400 curtain strips.

200 sash stops.

10 clothes racks.

20 hoe handles.

1 bread box.

12 voucher boxes.

2 commodes.

5 trap doors.

183 coffins.

18 boxes for shipping coffins.

148 dining room benches.

1 top to well.

1 hot house in front yard.

1 stairway.

1 shed at water works.

2 frames for flushing tanks.

9 pieces of furniture for apothecary and laboratory.

Report of Matron.

STATE LUNATIC ASYLUM, MILLEDGEVILLE, GA., Sept. 1st, 1896.

DR. T. O. POWELL, Superintendent:

Permit me to submit the enclosed as my report for the year ending September 1st, 1896. I would add that repairing has been done for the institution and all scraps and remnants have been put to a good use, and have been properly accounted for through the Storekeeper's office.

All of which is respectfully submitted,

MRS. J. M. DARNELL, Matron.

Storekeeper's Report.

OFFICE OF THE STOREKEEPER, GEORGIA LUNATIC ASYLUM, September 1st, 1896.

MR. L. J. LAMAR, Steward:

DEAR SIR—Herewith I hand you report of all issues in my department for the fiscal year beginning September 1st, 1895, and ending August 31st, 1896.

Amount of stock on hand the 31st day of August, 1896, \$7,928.17.

Apothecary Department—Amount of purchases of drugs, surgical instruments, liquors, etc., \$4,735.52.

Engineer's Department—Amount of purchases issued to engineer on requisition, \$10,104.77.

In the remainder of my report "amount of purchases" includes the stock I had on hand at the beginning of the fical year in 1895.

Very respectfully,

W. H. HUNTER, Storekeeper.

Chaplain's Report.

STATE LUNATIC ASYLUM, MILLEDGETILLE, GA., September 1st, 1896.

DR. T. O. POWELL, Superintendent, etc:

DEAR SIR—Divine services have been regularly maintained on each Sabbath and Thursday afternoon during the year, with the exception of some weeks in the Spring, when, on account of an epidemic of measles in the community, it was thought unadvisable by the Superintendent to permit any assemblies in the Asylum.

These services have been greatly appreciated by the patients, judging from the large attendance and the praiseworthy interest manifested. The music, of which Mrs. West has been faithfully and efficiently in charge, has seemed to be especially enjoyed.

Funeral exercises have been held over all deceased patients who were not removed home.

Visits to the sick, and to others, have been made by the Chaplain when the Superintendent thought it advisable.

Respectfully submitted,

D. W. BRANNEN, Chaplain.

Report of Librarian.

GEORGIA STATE ASYLUM LIBRARY, September 1st, 1896. Dr. T. O. Powell, Superintendent, etc.:

ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

LUNATIC ASYLUM OF GEORGIA,

FOR THE FISCAL YEAR

ENDING SEPTEMBER 1st, 1897.

To His Excellency, W. Y. Atkinson, Governor of Georgia:

The accompanying annual reports of the heads of departments of Georgia Lunatic Asylum, showing in detail the management of the Institution, were read, carefully considered, and adopted as parts of the Annual Report of the Board of Trustees for the fiscal year ending September 1st, 1897.

A careful study of these detailed reports must, we are sure, convince you that this Institution is thoroughly, well and economically managed.

An examination of the report of Steward Lamar discloses the fact that the per capita cost of maintenance during the year was in excess of that of 1896. The reasons for increased cost can be ascertained by examining Steward Lamar's report. The main reason is that many and costly repairs were necessarily made to-

the old buildings, and the cost of repairs is paid out of the support and maintenance fund. Even with this increased cost per capita you will find that the expense of supporting similar institutions in other States, even the most economical of them, is in excess of that of Georgia. The policy of your Board of Trustees is, and has ever been, to maintain the Asylum in the most economical manner possible, compatible with the welfare of its inmates.

Your Board of Trustees heartily endorse the recommendation of Superintendent Powell relative to changing the name of the Institution to that of Georgia State Hospital. The reasons for this request have been presented on several occasions in previous

Annual Reports of your Board of Trustees.

Your special attention is called to that portion of Supt. Powell's report relative to Mr. Wm. Swartz, of Chatham county, Mr. Alfred Stokes, of Chatham county, and Mrs. Roxie Ann Long, of Bryan county, inmates of the Asylum, who are not now insane

yet cannot be discharged except by the Degislature.

It is with pleasure that we direct your attention to the fact that 39 per cent. of the patients received in 1897 recovered. This fact should be fully known to those in whose families cases of acute insanity occur. Our citizens should know and act upon the well established fact that hope of cure of insanity is in direct ratio with the length of time insanity has existed in the individual. After a person has been insane for one year the hope of restoring him to sanity is small. The people of Georgia should send their insane relatives to the Asylum immediately that the fact is established that they are insane.

The question of Criminal and Convict Insane is fully discussed in Supt. Powell's report. We heartily endorse his position on

this question.

FINANCE.—The detailed reports of Steward Lamar and Treasurer Carr will fully acquaint you with the financial status of the Institution, and we respectfully refer you to these reports for any desired information relative to expenditures of appropriations for maintenance.

Your Board of Trustees refer with pleasure to the fact that the Lunatic Asylum of Georgia is at present thoroughly well equipped in its every department, and the efficiency of the Institution is fully equal to many asylums costing much larger sums of money per capita for maintenance.

Your Board of Trustees are pleased to report that the officials of the Institution have faithfully and efficiently discharged the duties of their respective positions during the year just closed, and we take this opportunity to publicly acknowledge our indebtedness to these officers for valuable assistance in the successful management of the Asylum.

In closing we beg to tender to your Excellency and to the General Assembly of Georgia our heartfelt thanks for the generous maintenance of the Lunatic Asylum during the year 1897.

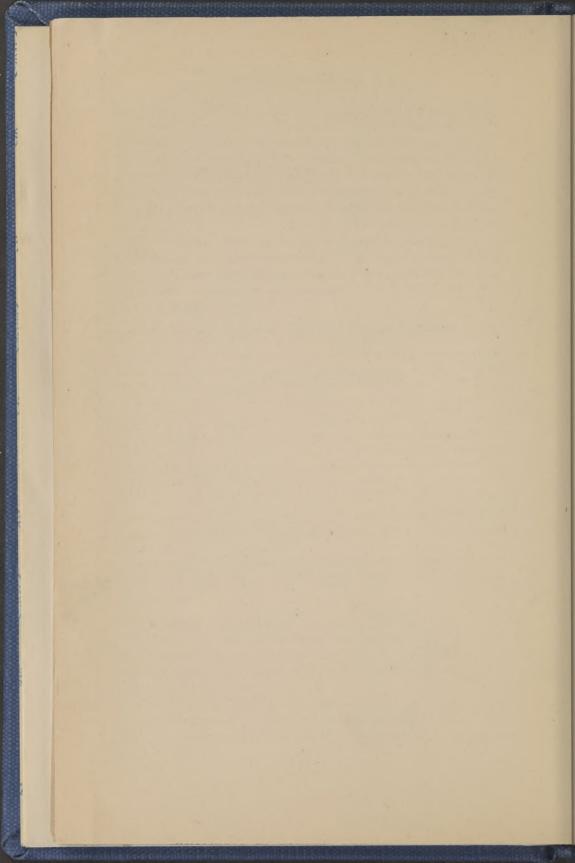

Respectfully submitted,

G. A. CABANISS,

President Board of Trustees, Georgia Lunatic Asylum.

EUGENE FOSTER,

Secretary Board of Trustees.

Report of Superintendent Powell.

STATE LUNATIC ASYLUM. Milledgeville, Ga., Sept. 1, 1897.

To the Honorable Board of Trustees, Georgia State Lunatic Asylum.

Gentlemen: In obedience to the requirements of the law and rules of ehe institution, I have the honor heeewith to submit for your consideration the following report of this institution, beginning September 1, 1896, and ending September 1, 1897, together with the reports of the Steward and Treasurer and other officers, giving a full and detailed statement of its operations in its every department, and showing the amount of provisions, clothing, bedding, drugs and indeed, everything purchased, from whom, price paid, and aggregate cost. Also the movement of its population, with such suggestions as I may think advisable or beneficial in conducting the affairs of the institution.

On the first of September, 1896, there were white patients on hand, 1,373, and colored 629, making a total of 2,002. There have been received since 412 whites and 264 colored, making a total reception of 676.

There have been discharged, removed, eloped, and died during the year 510, leaving on hand September 1, 1897, 2,168, of whom there are 46 whites and 6 colored on furlough not discharged.

The average number of patients under treatment during the year was 2,085, while the total number receiving treatment was 2,678.

It will be seen that the average number receiving treatment this year was 173 more than last year. We have 166 more patients on hand than at the close of last year.

The following tables will give in detail the movement of both white and colored population:

SUGGESTIONS.

I again call the attention of your honorable board to the wisdom of changing the name of the institution from the "Georgia State Lunatic Asylum" to that of "Georgia State Hospital." The names of most of the asylums in the United States have in the last five years been changed from "Lunatic Asylums" to "Hospitals." I think the moral effect would be good, but in changing the name the change should not go into effect until after the present appropriation year expires.

PATIENTS TO BE DISCHARGED BY THE GENERAL ASSEMBLY.

I desire to call your attention to three patients that are now well—two of whom we have never regarded as insane, but were sent here by order of the court. These, patients can only be discharged by the General Assembly, and I respectfully ask that you present this before the General Assembly when they convene.

The following are the names of the patients: Mr. Wm. Swartz, sent from Chatham county, Aug. 13th, 1895. Mrs. Roxie Ann Long, sent from Bryan county, May 3rd. 1897. and Mr. Alfred Stokes. sent from Chatham county, March 13th, 1897.

HEALTH.

The general health of the institution during the year has been remarkably good. We have been entirely exempt from all epidemic diseases, which indicate good hygenic condition

of the Institution, and from all contagious, infectious, and communicable diseases save tuberculosis.

Associated with insanity in the negro we find tuberculosis alarmingly prevalent, especially among the females. As a race their mortality is greater than in the whites, and the tendency of the disease is towards a rapid and fatal decline. By reference to the mortality tables and the report of the Pathologist you will see the large per cent. of deaths from tuberculosis in the female colored insane, and this record or per cent. is not based on ante-mortem suppositions but post-mortem evidences. All possible hygenic means have been used to check it. As to the ultimate result of this course time only can tell.

We have had no suicides during the year. Sevral casualties have occurred which were promptly reported to your honorable board. By reference to the mortality tables you will see that a large number of deaths were from incurable diseases. The ratio of death upon the number treated during the year is .oopper cent.

RECOVERIES.

The per cent. of recoveries upon the number received during the year is .39. The recoveries of each year depends largely, or almost entirely, upon the number of acute cases received.

If you will leave out those cases in which the duration of insanity is more than one year, you will find that the ratio of recoveries will be much higher, and if you will examine the reception records during the year it will be seen that cases of chronic mania; also epileptics of long duration, and many cases of terminal dementia, and some cases of senile dementia or senile exhaustion, and some of general paresis are received each year. With such cases as these there is nothing to justify the slightest hope of recovery. Hopeful cases, as a general thing, are the recent cases.

CRIMINAL AND CONVICT INSANE.

On this subject I can only repeat what I have said in former reports, and my apology for alluding to it again must be that I apprehend that the great evil and injustice to the ordinary insane in forcing them to associate with this class of the afflicted is not properly appreciated. Superintendents of all insane hospitals are fully agreed that the wards of hospitals for the ordinary insane is not the proper place for the care, custody, and treatment of the convict insane. It can be readily seen that the moral effect is hurtful. It impresses the ordinary insane that the

asylum is a prison and not a hospital for the care and treatment of the sick. It is also injurious to the convict and doubtful cases of criminal insanity. With many it is absolutely necessary to keep them under constant observation, and very frequently many are confined to their rooms; hence, diverting the attention of the nurses from other patients, thereby depriving them of that attention they should have. They are the most disturbing and demoralizing element that we have, creating constant anxiety and apprehension. A great deal of thought, labor, and attention of late has been given to the convict question as to the best mode of providing for them, and I trust in considering their care that proper provision of the convict and doubtful cases of criminal insane will not be overlooked. In my judgment there is no class that appeals more strongly for proper provision for their care and treatment, and all of the dictates of humanity and the pathetic appeals of the ordinary insane demand that separate provision should be made for them. To mix the two classes is a serious evil which is injurious to both, and an injustice to society, for they cannot be securely kept in a hospital for the ordinary insane, and it tends to encourage feigning of insanity which we all so devoutly wish to check.

While I think there should be a separate hospital for this class, the financial condition of the people, and the small number, would not perhaps justify such a course just now, but under the circumstances there is no good reason why a hospital in connection with the penitentiary for this class of the afflicted should not be established. If we have hospitals connected with the penitentiary for those who are physically sick, why not for those who are mentally sick? With such an arrangement, in my opinion, there would be far less feigning of insanity, and they would not be deprived of the ameliorating and curative influence of proper employment which is so important to both mental and physical health, and which cannot be obtained for this class of the afflicted in an asylum for the ordinary insano; nor would they be irritated and annoyed at seeing others have privileges that could not be extended to them, and would not be subject

to insults from the ordinary insane.

There are other classes received into the asylum that should be provided for elsewhere, and that is the defective classes with depraved tendencies which are perhaps inherited and developed by bad environments. They too cannot be properly cared for in an asylum for the insane. Their surroundings all tend to develop the depraved tendencies rather than improve them. They should be placed in a reformatory where their moral faculties could be educated and developed, and where they could be engaged in some useful employment from which we would be justified in hoping the depraved tendencies might be eliminated.

especially those in the formative stage of life, and not only become self-supporting but good and useful citizens and productive powers of the State instead of a burden to it.

Before our asylum can be regarded as firmly established on a scientific basis these classes must be separated from the insane

proper.

To establish a hospital in connection with the penitentiary for the convict and doubtful cases of criminal insane would be a higher humanitarian mode of caring for both classes where they could be securely kept, and have the ameliorating and curative treatment of judicious employment and exercise. They should be treated as the ordinary insane as far as possible, and not required to wear the convice garb, and their attendants should be gentle and humane in their attitude towards them, and treat them in every way as insane patients there for treatment and cure.

North Carolina has established in the State Penitentiary a department to be known and designated as "The Department for the Criminal Insane." In this department both criminal and convict insane are received. As to the conduct, management, and results of this department I have no knowledge. It was established I think the early part of this year.

PATHOLOCIGAL DEPARTMENT.

This department I now regard as almost complete in every particular, and in my judgment reflects great credit to the State and your Honorable Board. Permit me to express my high appreciation for your hearty co-operation in its equipment. The good that will result from it to suffering humanity and the advancement of science cannot be overestimated.

The pathologist, Dr. Oertel, has used every available opportunity in securing pathological collections which consist of many mounted microscopic sections of diseased tissue, and much preserved material for future study, and gross specimens of interest, etc. All cases in which it was possible, have been investigated by autopsy, and results carefully noted for micro-

scopic research.

I feel sure the report of the pathologist will satisfy the profession and others that our claims as to its being an advance in psychiatry is justifiable, and from it we confidently expect scientific progress, and I hope it is a question of only a short while when every hospital for the insane will have a thoroughly equipped laboratory with a skilled neuro-pathologist.

I must express my gratitude to Dr. Oertel for the commend-

able zeal, fidelity, and untiring efforts he has given to the development of this department, and to Dr. Mobley for the faithful and efficient aid he has given in the work.

INFIRMARY WARDS AND TRAINING SCHOOLS.

The first essentials of hospital life are training schools and infirmary wards which will give the feeble and sick special care and attention by trained nurses, and better night supervision.

Several wards have been set aside and especially equipped as infirmary wards. Bright, airy wards have been selected, and everything possible done to fit them for the intended service, and when the cottages for the Assistant Physicians are completed the Centre Buildings of both Male and Female Convalescent Buildings will be converted into infirmary wards, and rooms in each building set apart for surgical work and thorough clinical examinations. The basements will be used for giving nurses special training in cooking for the sick, which will improve their service.

All cases of serious illness in these buildings will be at once removed to one of these wards, where special attention may be

given them by nurses trained for this duty.

A course of lectures has been delivered to the white female nurses by our efficient superintendent of nurses with the result of greatly increasing the efficiency of the service, as evinced by greater interest and intelligence shown by the nurses in general in the discharge of their duties and attitude towards the patients.

The subjects taught have been Anatomy, Physiology, and practical bed making, bathing patients, and the general work of the sick room, chart making, and the recording of data relating

to the condition of the patients, etc.

The text books used are "Domville's Manual for Hospital Nurses" and "Handbook for the Instruction of Attendants on

the Insane."

Throughout the year weekly lectures have been delivered, by the physician in charge, to the nurses of the colored female department. The subjects touched upon were Anatomy,—gross and minute—Physiology, Bacteriology, Mental Diseases, Bandaging, Preparing Surgical Dressings, and the keeping of charts and records at the bedside. Special cookery for the sick is to be taken up shortly.

It has been the aim to make the course as practical as possible, and many of the nurses have shown an interest and apti-

tude quite remarkable and to be highly commended.

An effort has been made to secure young, bright, and intel-

ligent nurses, and none are taken who cannot read and write with proficiency.

The nurses have been uniformed and the standard of neatness exacted is high.

SURGICAL WORK.

Several rooms have been fitted for surgical work, two aseptic operating tables and many necessary instruments purchased, in order that such operations as may become necessary through accident or which are expedient for the welfare of the patients, may be performed under modern aseptic precautions.

The end in view is to finally provide performance of the most delicate and serious tasks in the field of surgery, in order that our patients may be given the benefit of any aid which this branch of medicine may offer.

Several major operations have recently been satisfactorily performed.

CONSUMPTIVES.

Segregation of all cases of pulmonary tuberculosis has been carried out in the female colored department, and all possible precautions taken towards disinfection of sputum and the rooms occupied by this class. A separate court for open air exercise will soon be prepared for them.

The result of this procedure only time can demonstrate, but it is hoped thereby to lessen the alarming mortality from this cause, which among the female negro insane reaches its highest limit.

The sputum of suspects is immediately submitted to microscopical examination and steps taken according to the findings.

LARYNGOSCOPICAL AND OPTHALMOSCOPICAL.

A suitable room, with illuminating apparatus, has been arranged in order to facilitate work in these branches, and satisfactory examinations of the throat and eyes can now be made.

EMPLOYMENT AND AMUSEMENTS.

Many of the male patients have been employed in various departments of the institution in doors and out; in the work

shop for patients—mattress making, upholstering and repairing of furniture, etc., in the gardens, at the dairies, hog lots, machine shop, carting, mowing, cleaning of the yards and courts, working in the engine rooms, kitchens, and piling lumber; working in Centre Building, storehouse, etc. The female patients have been employed in the laundries, dining rooms, and doing all the sewing and mending of the institution.

The amusements during the year have been kept up with the usual good results as heretofore. These occasions are not only productive of much pleasure to our household, but of much good in diverting the minds from distressing mental conditions. Much credit is due Dr. Whitaker for his untiring efforts to

make them as pleasant to all as possible.

The employment and amusements have been as diversified and liberal as the means at our command would permit. These occupations are not carried on so much for the economy as for the benefit to the patient from exercise of mind and body.

IMPROVEMENTS AND REPAIRS.

Many improvements and repairs have been made during the year. The wear and tear of a hospital for the insane, especially one as large and old as this, is necessarily very great, and if it is to be kept in good order the replacing of worn out machinery, furnishing and repairing of rooms, and corridors, will necessarily require considerable expense each year, and economy in asylums demands that all repairs should be done at once; delay means increased expenses. During the past year many of the wards have been repainted; many of the floors in the halls, rooms, water closets and bath rooms where they were decayed and badly worn from long use have been replaced by new ones. and in the old building, which was so much dilapidated, much of the plastering had to be taken off and replastered. One more infirmary ward has been fitted up, and every effort has been made to have it as little liable to infection as possible. The rooms are hard finished; window frames, door frames, and doors are coated with enamel so that they can be washed and disinfected. An operating room has been fitted up and equipped to meet all the requirements of modern antiseptic surgery.

The heating apparatus under the old building which was of the old style, and which had been in use for 40 or 50 years, had become so defective from long use it was impossible to heat the building satisfactorily, and the consumption of coal on account of its defects was very large. This apparatus is being repaired;

indeed almost made new.

ENGINEER.

For a full and detailed account of repairs, improvements, etc., I refer you to the engineer's report.

FINANCES.

The report of our efficient Steward will the Institution is conducted that the finances of possible economy, and his books show that the welfare of the patients, and the proper preservation of the property, has been properly and liberally provided for. The per capita per diem for the past year has been .33 II-100. It should be remembered, however, that the support and maintenance for 1898 was based upon 2,300 patients. and the supplies at last year's prices. If the patients should continue to come in as rapidly as in the past three or four months it is more than probable that the number will run over 2,300, and there seems to be an advance in nearly all supplies; hence, it will require the strictest economy to get through the year, and I have grave apprehensions as to our ability to do so and do full justice to our charge.

ASSISTANT STEWARD.

By reference to the report of the Assistant Steward you will find a detailed account of the results of the garden, dairy, amount of pork raised, etc. The clear profits in this department for the year over all expenses is \$1,454.73. This is much less than last year, but it is due to the fact, as you will see from his report, that we have established a new dairy, and bought quite a number of cows, and have in connection with the new dairy built two barns and a cottage for the dairyman. This, together with the loss of hogs last year from cholera, and the failure of winter vegetables from continued drouth has caused the falling off in net profits. We apprehend the same results this winter so far as potatoes, collards, etc., are concerned, which are our principal winter vegetables.

STOREKEEPER.

By reference to the report of the Storekeeper you will find a full account of the conduct and management of that department.

MATRON.

The report of our efficient Matron will give a full and complete account of the work done in her department.

APOTHECARY.

The report of the Apothecary gives an itemized statement of the work done in that department, the number of prescriptions filled, and the amount of drugs and instruments on hand.

LIBRARIAN.

It gives me great pleasure to acknowledge the contributions of books, papers, and periodicals, etc., from the many friends of the institution, which have contributed so much to the welfare and pleasure of the patients.

By reference to the Librarian's report you will see a list of those generous contributions, and all who contributed, as far

as it has been possible to ascertain.

RELIGIOUS SERVICES.

Religious services have been conducted regularly on Thursday and Sunday afternoons during the year by our efficient chaplain, Rev. J. W. Wray, and his coming was looked forward to with much pleasure. The attendance upon services has generally been large and conduct good. He has responded to all calls to bury the dead.

CONCLUSION.

In conclusion, it gives me great pleasure to express my gratitude to all officers, attendants, and employes who have discharged their respective duties faithfully, and to your honor able board I again render acknowledgement for the lively, active interest you have always taken in the management of the affairs of the institution, and the valuable aid you have given me.

Invoking God's blessing on our efforts in the future, 1 am, Very respectfully,

> T. O. POWELL, Superintendent, etc.

Report of Pathologist.

STATE LUNATIC ASYLUM,

September, 1st, 1987.

Dr. T. O. Powell, Superintendent.

Sir: I have the honor to submit herewith my report as Path-

ologist for the year ending this date.

During the past year the facilities of the laboratory have been augmented by the addition of necessary apparatus, glassware and chemicals, so that it is at the present time well equipped for any work that may be required by the needs of the institution.

Suitable lights have been placed in the necropsy room and

night work thus made possible.

The photographic rooms which I suggested in my former report, have been built and recently occupied thus furnishing a most necessary adjunct for the pictorial recording of cases of interest.

As they adjoin the laboratory their convenience and utility

are much increased.

For many reasons it has been deemed best to treat the subject of pathology broadly and not confine the work to the lesions of the nervous system alone.

The brains of all cases have been subjected to careful inspection and any microscopic lesions found have been recorded.

Brain weight in relation to body weight and height has been noted and a large number of cerebri have been preserved entire as a basis for a collection which, it is believed, will prove of great interest and value and which will be subjected to future study.

While many microscopic sections of nerve tissue have been made and examined no systematic researches in this direction have been carried out, it having been thought best to expend the available time in the studies of the general organs and more

especially of the kidneys.

Nor has much been attempted in the way of cytological research in neurology. However pregnant of good results this field may be, however rife with allurments, it requires far too much of technical labor and expenditure of time to be more than touched upon unless one's entire energies be devoted to its pursuit.

Past experience has shown the fact that no constant lesions can be demonstrated in the brains of those dying insane, gen-

eral paresis excluded.

No one will deny the value of neuro-pathology per se, but alone it will never prove the path which will lead us on to victory.

The prosecution of general pathology, and especially that of the circulatory and glandular systems, seems a much more

promising field in which to delve.

From this conviction it has been thought best to set forth the major facts revealed by each necropsy in as brief and compact a form as possible. On account of the undoubted part that renal lesions play in the production of mental alienation some special degree of attention has been paid to the condition of these organs and the microscopical findings given.

The percentage of cases in which the kidneys were considered to show changes to a pathological degree will be seen to be very large. This is partly due to the fact that so great a proportion of the cases died of pulmonary tuberculosis in which disease renal lesions are so frequently present as to be almost

considered constant.

It has been deemed advisable to include in the tabulated statement appended those cases which came to post during the latter part of last year and which were briefly mentioned in my former report, in order that a full record of all cases to date may be pesented in a form more comprehensive than was then possible.

Bacteriological examinations by culture have been limited to the testing of disinfectants claimed to possess antiseptic proper-

ties.

Repeated examinations of sputum have been made to deter-

mine the presence or absence of the tubercle bacillus.

The method used is so far superior to that generally in vogue that it may not be amiss to mention it, for though it has been in use in Johns Hopkins Laboratory and in several others, for a number of years and has once or twice been described by writers other than myself it does not seem to have become well known.

The variation from the usual procedure consists in the elimination of the cover glass, the sputum being spread directly upon the slide in a broad and thick layer. Evaporation is accomplished by heating over a bunsen flame, care being taken not to scorch the sputum, and this at the same time fixes the latter

upon the slide.

The Ziehl-Nielson method of staining is used, the carbolfuchsin being dropped upon the slide while it is still hot and allowed to remain for a few moments. The preparation is then washed under the spigot, and decolorized in 5 per cent. aqueous solution of sulphuric acid by being dropped into a petri dish containing the liquid. It is again washed, stained with the methyl blue solution and after washing dried, first with filter paper, and then thoroughly over the bunsen flame. As soon as it is cool enough a drop of cedar oil is put directly upon the now stained sputum and examination by 1-12 immersion objective proceeded with.

When this is completed the slide can be laid aside to be cleaned and used over again or if it is desired to preserve it a

drop of balsam and a cover glass are superimposed.

The facility of manipulation, increased depth and surface for examination, and economy of cover glass, render this method far superior to any other.

Pus smears from necropsies, or the living subject, may also be

made upon the slide with advantage.

Berkley's new silver stain for axons was used in a number of cases with fairly good results. It is more certain than the older methods and when successful gives beautiful pictures of the structures stained by it.

Van Gieson's method has been largely used for general tissue work on account of its simplicity and its vivid coloring of connective tissue and blood. It is surprising that so useful a stain

is not more generally resorted to.

Analysis and microscopic examination of the urine, shortly after admission, in the cases of 87 colored females yields the following results:

Both albumen and casts present in 8
Albumen alone present in 19
Casts alone present in 18
Neither albumen nor casts present in 56

It will be seen that the percentage in which there were albumen or casts is quite high, 51 per cent., and still is much lower than has been determined by some other observers, one of whom asserts that he has found one or the other of these substances in 72 per cent. of all recent cases examined.

The chemical tests used for the determination of the presence of albumen were Esbachs, the cold nitric acid test, the heat test and Purdy's sodium chloride test, this latter being very deli-

cate and eliminating the mucine reaction.

Sedimentation for microscopic examination has been accomplished by centrifuge. All urines have been examined while

fresh and as soon after admission as possible

The 40 per cent. solutions of Formaldehide have been employed in aqueous solutions of the strength of one part of the original solution to ten of water, for preserving brains entire, as well as other gross specimens.

This agent has been found superior to alcohol on account of

its quick action and remarkable power of penetration.

Its combination with alcohol for the above purpose is not so satisfactory as the aqueous solution as it produces greater shrinkage of the tissue.

It is gratifying to note that the mortality from pulmonary tuberculosis in the colored female department seems to have yielded to our efforts to decrease it.

The 14 necropsies on this class reported last year gave a percentage of 78.57 of deaths from this disease.

During the year just ended examinations of the bodies of 52 colored females have been made. Of these 16, or 30.76 per cent., were found to have tubercular lesions of the lungs.

Several cases died of other causes, the tubercular lesion being limited and circumscribed.

Of course these figures are based upon too small a number of cases to be of much value but it leads to hope that the endeavors made to eradicate this scourge from the institution have not been altogether in vain and that the coming year's report may show a still farther decrease of deaths from this cause.

Especial interest attaches to the lesions found in Case No. 48 illustrating as they do the power of the carcinomata to perforate bone and the great injury to which portions of the brain may be subjected without producing paralysis or death.

The patient was a white female, 60 years of age, whose mental

disease was chronic melancholia.

Several years ago a small tumor of the left frontal region appeared and went on to ulceration and steady growth.

She grew more feeble as the disease progressed, complained of pain but did not take her bed, ate and slept fairly well and had

no paralysis. Speech was hesitating and slow.

She walked to the dining room the evening before her demise and ate supper as usual. Shortly after supper it was observed that she was not so well as she had been during the past days and a nurse was detailed to sit up with her during the night.

She gradually became comatose and died the following morn-

ing at nine o'clock.

A synopsis of the autopsy is as follows:

The left frontal, left orbital and supra-maxillary regions are occupied by a large fungoid tumor. The surface is ulcerated and eroded to such an extent that the frontal sinus is exposed and a probe may be passed into the infundibulum. The roof of the orbit is to a large extent absorbed, the brow and lid are partly gone and the eye presents a shrunken gray mass.

The edges of the growth are indurated and raised above the surrounding tissue to the height of 5 m m. The central portion is considerably depressed, the whole surface is pinkish, and cov-

ered with foul-smelling pus. The longest diameter of the tumor is 14 c m, its width 9 c m.

There is a large, irregular erosion in the frontal bone 55 m m in diameter. The dura is invaded anteriorly, the thickened por

tion corresponding to the opening in the frontal bone.

The arachnoid is cloudy and beneath it, in the sulci and in streaks over the convolutions and particularly along the vessels, is a thick, creamy pus. This condition obtains over both hemispheres, the cerebellum and cord.

Upon section, the left frontal lobe presents a large cavity filled with creamy pus. It is 4 c m long, 25 m m wide and 35

m m deep, its greatest diameter being antero-posteriorly.

The path of infection can be traced from the base of one of the frontal sulci whose orifice corresponds with the lower portion of the diseased dura.

Diagnosis: Perforating Epithelioma of forehead, abscess of left frontal lobe and septic menengitis.

Death was finally due to the latter cause, rather than to the

other grave lesions present.

Plates No. I, II III and IV illustrate the condition so well that further description seems unnecessary.

Case No. 20 deserves mention on account of the rarity of Acute Yellow Atrophy of the Liver.

Bodies thought to be protozoa were numerous in the tubules and capillaries of the kidneys. See Plates No. VI and VII.

Similar bodies were observed in the kidneys in Case No. 55.

PLATE No. 1.
Perforating Epitheleoma of Forehead.
Case No. 48.

Case No.	Race	Sex	Age	Mental Disease	Duration	GROSS ANATOMICAL LESIONS.	Hours after death of section	Weight of Kidneys Left Rig	NATION OF KIDNEYS.
1	С	F	46	Chronic mania.		Calcareous degeneration of aorta; old pleuritic adhesions; chronic paranchymatous nephritis; cystic degeneration left ovary; fibroid of uterus.	7	Grms Grm 175. 150	thickened, and a few atrophied cells of convoluted tubules show cloudy swelling and advanced disintegration. Fibroserus detritus and casts in large collecting tubes. Endartritis of larger vessels.
2	C	F	23	Acute mania.	2 years.	Pachy-meningitis hem- orrhagica interna; gen- eral miliary tuberculo- sis; (brain pleura, lungs diaphragm, peritonenum and intestines; cystic degeneration of ovaries bilateral pyosalpinx; pa ranchymatous nephritis		140. 130	Atrophy of a number of the glometruli, with hyperplasia of capsule. Cloudy swelling of epithelium of the tubes so that in most cases their lumen is obliterated. Disintegration of many of the cells of the convoluted tubes. Areas of round cell infiltration.
3	C	F	30	Chronic mania.		Pulmonary tuberculosis tuberculosis of spleen "liver; "intestines	; 8	120. 10	The capsules of Bowmar are thickened and their endothelum proliferated to a marked degree. Hyaline degeneration of many glomeruli. Cloudy swelling of cells of convoluted tubes, many cells disintegrated and stripped from the basement membrane. Increase of connective tissue general.

4	C	F	45	Epileptic insanity.	15 years	. Tuberculosis of brain; chronic endocarditis(mi- tral valve); atheroma- tous and calcalreous aorta; tuberculosis of lungs; tubercular pero- tonitis.	8	100.	110.	Atrophy of the glomeruli and areas of round cell infiltration. Thickening of the capsule of Bowman. Cloudy swelling of epithelium of convoluted tubes, with loss of nuclei and disintegration of many of the cells.
ŏ	C	F	38	Acute mania.	18 mos.	Fatty degeneration of heart, with hypertrophy and dilitation; right hydro-thorax; oedema of lungs; atheroma of arch and descending aorta.	22	200.	200.	Putrifactive changes obtain so that nothing definite can be determined.
6	C	F	26	Acute mania.	1 year.	Septic peritonitis; pul- monary tuberculosis; miliary tuberculosis of liver, with fatty degen- eration.	4	190.		General increase of connective tissue. Thickening of capsules of Bowman and proliferation of their endothelium. Atrophy and degeneration of glomeruli. Thickening of externa and media of larger arteries. Passive congestion.
7	C	F	25	Acute mania.		Opacity of pia-araen- noid; right septic pleu- ritis; pulmonary tuber- culosis; tuberculosis of spleen; cystic degener- ation left ovary; fatty degeneration of liver; tuberculosis of intes- tines.	6	180.	150.	Capsule thickened. Hyperplasia of capsule of Bowman, with proliferation of endothelium and atrophy of glomeruli. Cloudy swelling of cells of convoluted tubes, with loss of nuclei and in many cases desquamation, or breaking down of the protoplasm to the level of nucleus. Pigmentation of epithelium of tubes.

Case No.	Race	Sex	Age	Mental Disease	Duration	GROSS ANATOMICAL LESIONS.	Hours after death of section	Weig Kidi Left		RESULTS OF MICROSCOPICAL EXAMINATION OF KIDNEYS.
8	С	F	33	Acute mania.	5 mos.	Thickening of mitral valve and shortening of posterior segment; atheroma of aorta; abscess of spleen; paranchymatous nephritis; fatty liver	21	Grms 180.	Grms 150.	Marked general increase of connective tissue. Universal thickening of capsules of Bowman. Frequent atrophy of the glomeruli. Almost total degeneration of the epithelium of the convoluted thbules, largely post-mortem.
9	C	F	20	Chronic mania.	18 mos.	Oedema of brain; pul- monary tuberculosis; tu- berculosis of spleen; in- terstitial nephritis; cys- ts of right kidney; fatty liver.		100.	75.	throughout the organ, thickening of capsules of Bowman to about three times their normal diameter and proliferation of their endothelial cells. Atrophy of glomeruli. Endartritis obliterans in larger vessels. Cloudy swelling and advanced disintegration of cells of convoluted tubes—partly postmortem. Some tubes contain casts.
10	C	M	64	Acute mania.	1 year.	Atheroma and calcare- ous degeneration of ce- rebral arteries; thicken- ed dura; endocarditis aortic, calcareous degen- eration of aorta and large trunks of the arch interstitial nephritis.		65.	70.	Capsule very much thickened and connective tissue generally increased. Capsules of Bowman thickened, glomeruli atrophied and many hylaline. Epithelium of tubes swollen, granular and disintegrated, many fallen from basement membrane. Casts in the tubes of Henle. In some of the tubes the cells have entirely disappeared, the thickened basement membrane only remaining. In some locations the epithelial cells show dense pigmentation, with dark brown granules. There are several areas of round cell infiltration. Endartritis obliterans in larger vessels.

11	C	M	27	Congenital defect.		Thickening of dura; hemorrhagic areas in endocardeum; oedema of lungs	3	160. 1	30.	A slight increase of connective tissue and several of the glomeruli are atrophied to half their normal size. Passive congestion. Cloudy swelling and in some instances loss of nuclei of cells of convoluted tubes. A number of cases of proliferation of the endothelium of Bowman's capsules.
12	C	F	40	Epileptic insanity.	19 years.	Thickened and opaque dura; cyst of nucleus caudatus; pulmonary tuberculosis; fibroids of uterus.	12	130. 1	30.	Capsule thickened, glomeruli swollen and epithelium of convoluted tubes almost entirely disintegrated, the nuclei having nearly all disappeared. The cells are swollen, granular, and fill the lumen of the tubes. Passive congestion. Blood well preserved.
13	C	F	45	Terminal dementia.	23 years.	Pulmonary tuberculosis; tuberculosis of spleen, uterus and illium; right pyosalpinx.	3	80.	90.	Connective tissue of pyramids greatly increased. Hyperplasia of Bowman's capsules, cloudy swelling of tubular epithelium and desquamation of many of the cells. Thickening of the blood vessels. Intertubular hemorphages.
14	C	F	27	Terminal dementia.		Thickening of dura; small fibroid tumor of pous (from arachnoid); pulmonary tuberculosis; peforating ulcer of illium; general septic peritonitis.	9	120. 11		Extensive round cell infiltration in many portions of cortex. Capsules of Bowman thickened, and their endothelial cells increased. Cloudy swelling of epithelium, loss of nuclei and total disintegration of many of the cells. A few tubes contain casts.
									1	ယ္

Table Showing Results of Post-Mortem Examinations from June 20th, 1896, to Sept. 1st, 1897.

Case No.	Race	Sex	Age	Mental Disease	Duration	GROSS ANATOMICAL LESIONS.	Hours afier death of section		
15	C	F	42	Chronic mania.	10 years.	Pulmonary tuberculosis; fatty liver.	3	Grms Grms 130. 140.	About one-fourth of the glomeruli are atrophied and hyaline. Hyaline degeneration of the vasa afferentia occur in many others. Epithelium of
									tubes, granular, many without nuclei or entirely broken down. A number of the collecting tubules have lost their nuclei and are filled with blood.
16	C	F	35	Epileptic dementia.	29 years.	Dura mater thickened atrophy frontal lobes cardiac hypertrophy pulmonary tuberculosis		160. 160.	Changes too slight to be deemed Upathological.
17	C	F		Epilepsy.	3 years.	Contracture of left fore- arm and hand, and mus- cular atrophy of all the extremities; hydroceph alus; right lobar pneu monia.	4	80. 80.	and there is a proliferation of the cells of their capsules. Several glomeruli are hyaline. Some cloudy swelling of the cells of the convoluted tubes and a few of the tubes of Henle contain hyaline casts.
18	C.	F	45	Acute mania.	5 mos.	Oedema of cerebrum cystic degeneration o right ovary.	; 4 f	1119. 125.	Marked atrophy of the glomeruli; nearly all are shrunken, some to less than half their normal size, and surrounded by a granular detritus. The cells of the tubes are broken down to the border of the nuclei, and many nuclei have disappeared. The tubes contain a granular detritis.

19	C	F	35	Chronic mania.	4 years.	Thicknening of dura; calcareous nodules in spleen; chronic paranchymatous nephritis.	3	325. 215.	and partly denuded of their epithelium, and their capsules filled with granular detritus. The epithelium of the convoluted tubules has broken down as far as the nuclei and their lumen is filled with granular detritus thus formed. All of the tubular epithelium is cloudy, swollen and granular.
20	C	F	27	Not insane.		Acute yellow atrophy of the liver; hemorrhagic infarcts of all the or- gans.	2	180. 150.	General, though slight, increase of Econnective tissue. Intense fatty degeneration of the tubular epithelium. Engartritis of the larger vessel. Groups of protozoa are found in many of the collecting tubules and some of the capillaries. (See Plates Nos. 5 and 6).
21	С	F	65	Chronic mania.	16 months.	Thickened dura; atheroma of coronary arteries, mitral and aortic valves. Calcareous degeneration of aorta; cystic degeneration of kidneys; chronic paranchymatons; nephritis; fibroids of uterus with calcareous degenerations.	10	290. 195.	
22	С	F		Senile dementia.		Post-mortem records lost.			Some of the glomeruli are fibroid, but most of these structures show no changes. Slight cloudy swelling of tubular cells and increase of connective tissue in the pyramids.

58	С	М	80	Senile dementia.		Pachy-menengitis externa ossificans; ccrebral atrophy; atheroma internal carotids; endocarditis (mitral) and calcareous aorta; cystic degeneration of kidneys.		Grms 100.	Grms 80.	Typical cirrhotic kidneys in advanced stage. General increase of connective tissue, with corresponding atrophy of tubules and glomeruli. Obliterative endartritis very pronounced. Cells of the tubules are in many cases desquamated and degenerated. The tubes contain sero-fibrinous exudate, some blood, others casts. Passive congestion.
59	C	F	59	Chronic mania.	15 years.	Thickened dura; cerebral atrophy; fatty degeneration of heart, with hypertrophy and dilitation; atheroma of aortacystis of left kidney fibroid of uterus; fatty liver.		150.	114.	Thickening of Bowman's capsules. Atrophy of glomeruli, others hyaline. Small hemorrhagic infarcts. Intense fatty degeneration of nearly all of the tubular epithelium.
60	C	M	39	Epilepsy.	39 years.	Cerebral congestion; hydrocephalus; cerebral atrophy.	7	145.	180.	Capsules of Bowman more or less thickened, nearly all glomeruli atrophied, some fibroid. Large areas of dense round cell infiltration and connective tissue growth in which the cells of the tubules are totally destroyed. In the pyramids the hyperplasia of connective tissue is universal and marked. In portions of the tissue not involved as above, many of the cells of the convoluted tubules are cloudy, granular and without nuclei. Enda; tritis is marked.

61	C	F	37	Acute mania.	6 weeks.	Cerebral congestion and oedema; splenic hypertrophy.	3	140.	120.	Some of the glomeruli have lost many of their endothilial cells. The lumen of the tubes is filled with a sero-fibrinous exudate. The cells are in good condition.
62	C	M	52		6 mos.	Cerebral atrophy; atheroma middle cerebral arteries; right pleuretic adhesions (old); miliary tuberculosis lower lobe left lung and middle lobe right lung; renal calculus left kidney; cysts right kidney.	2	150.	130.	General hyperplasia of connective tissue—greatest about the glomeruli. Many of Bowman's capsules thickened and glomeruli atrophied. The epithelium of the tubes shows little change, but some tubes contain hyaline casts. Marked endartritis.
63	C	F	50	Terminal dementia.	5 years.	Dura thick, rough and opaque. Pachy-menengitis interna hemorrhagica; atheroma basal arteries; dilitation left ventricle; right fibroplastic pleurisy; haematoma left ovary.		150.	150.	Very little normal kidney structure is seen in sections examined, it having been replaced by connective tissue and an extensive round-celled infiltration, which in some areas is necrotic. The glomeruli are nearly all atrophied and hyaline, and the few remaining cells of the tubules cloudy, granular and broken down.
64	C.	M	48	Epileptic dementia.		Internal table left parietal bone extensively thickened; pachy-menengitis externa ossificans; an old organized clot lies over the left occipital and parietal lobes; atrophy and softening of convoluitons in these regions; softening of right frontal lobe.	7	150.	140.	General and marked connective tissue increase. Hyperplasia of Bowman's capsules and atrophy of many glomeruli. Cloudy swelling of cpithelium of convoulted tubules, with loss of nuclei in many cases. Endartritis obliterans.

110:-- M.

Many small areas of more dense sclerosis, involving several glomeruli and a number of tubes with corresponding atrophy of these structures and often hyaline degeneration of the tufts. The cells of the convoluted tubes are in various stages of disintegration, which in some instances is complete. The tubes are filled with detritus, and a large number of casts are observed in situ.
67	C	F	39	Chronic mania.	13 years.	Dura thick and opaque left ventricle dilated to twice its normal size adherent pia; pleuretic adhesions; pulmonary tuberculosis; cysts okidneys; paranchyma tous nephritis; fattyliver.	; e y f	132. 132.	Some glomeruli are atrophied. Some show loss of endothelium, and in nearly every case there is a granular deposit within the capsule, while a number of instances of proliferation of capsular endothelum are noted. The epithelium of the convoluted tubules is granular, the outer borders of the cells often indistinct, and the lumen of the tubes filled with detritus, granular or sero-fibrinous.

68	C	M	38	Acute mania.		Yellow softening of right superior frontal convolution; thickening of pia-arachnoid in syl- vian fissures; pulmona- ry tuberculosis; gangre- nous appendix; fatty liver.	9	130.	100.	Changes slight and not to a pathological degree.
69	C	F	24	Acute mania.	2 weeks.	Cerebral congestion.	3	105.	105.	of connective tissue. Changes are not to a pathological degree.
70	C	F	26	Chronic mania.	16 mos.	Adherent pia-arachnoid; pulmonary tuberculosis. (anomaly, left double ureta); see plate V. Cyst right kidney; fatty liver.	12	115.	100.	mids. The epithelium of convoluted tubules swollen and opaque. Many nuclei have disappeared, and the cells are often broken down completely, a granular mass filling the tubes; changes partly post-mortem.
71	C	F	31	Chronic mania.	3 years.	Frontal bone is 12 m m thick; inner table thick-ened; pachy-menengitis externa ossificans; left obliterative pleuritis; atheroma of aorta; pulmonary tuberculosis.	2	150.	130.	Great hyperplasia of connecting tissue of pyramids, with corresponding atrophy of tubules. Cloudy swelling of cells of convoluted tubes, many of which are broken down to a level with the nuclei. Lumen of tubes filled with granular detritus. Many casts in situ.
72	С	F	17	Epileptic.	2 years.	Bilateral atrophy of parietal and occipital convolutions.	8	112.	110.	Connectiee tissue of pyramids increased. Cloudy swelling of cells of convoluted tubes and some loss of nuclei. Partly post-mortem change.

MIN MIN

Case No	Race	Sex	Age	Mental Disease	Duration	GROSS ANATOMICAL LESIONS.	Hours after death of section	Weight of Kidneys Left Right	RESULTS OF MICROSCOPICAL EXAMINATION OF KIDNEYS.
73	С	F	60	Chronic mania.		Atheroma basila and middle cerebral arteries Sarcoma lungs, kidneys uterus and liver.		Grms, Grms 150. 130.	Universal connective tissue increase most marked in the pyramids. The glomeruli are shrunken and surrounded by granular detritus. Several areas of round cell infiltration. Cells of tubules degenerated as far as outer border of nuclei. A circumscribed tumor of the cortex consists of large spindle cells, having no definite arrangement, with an intercellular substance of connective tissue. (Sarcoma).
74	С	F	47	Chronic mania.	16 years.	Pachy - menengitis ex terna ossificans. Cardia hypertrophy and dilita tion; (weight of hear 645 grams); interstitia nephritis; cyst right fal lopian tube.	t 1	140. 110.	Areas of pronounced sclerosis, round cell infiltration and fibroid degeneration of glomeruli and desquamation of tubular epithelium. In other portions cloudy swelling of cells of tubules, many without nuclei and broken down. Tubules of pyramids contain many casts in situ, and in this region sclerosis is prominent. Walls of the vessels thickened.
75	С	F	40	Chronic mania.	3 years.	Pulmonary tuberculosis cyst left ovary; fatt liver.		130. 140.	Many glomeruli atrophied, a few hy aline. Cells of convoluted tubules granular and broken down to the level of the nuclei and the tubes filled with the detritus thus formed. In the tubes of the pyramids casts in situ are frequent. Extensive hyperplasia of externa of arteries.

76	C	M	31	Recurrent mania.	2 years. Miliary tuberculosis of lungs and liver.	7	160. 155	tissue. Capsules of Bowman thickened and glomeruli atrophied. Several are hyaline. Cloudy swelling of cells of convoluted tubules and breaking down of their outer borders. A few casts in situ.
77	C	F	65	Recurrent mania.	Thickened dura; atheroma of basal arteries; fatty and dilated heart; calcareous and aorta; old pelvic adhesions.	4	115. 106	Areas of sclerosis involving one or two glomeruli, which are fibrous, and a number of tubules, which have atrophled, are common. Most of the glomeruli are atrophied and show more or less loss of endothelium, while their capsules contain a granular detritus. The cells of the convoluted tubes are very thin—most of them broken down to the level of the nuclei. The lumen of the tubes is filled with detritus and many casts. A few interbubular hemorrhages.
78	C	M	70	Senile dementia.	Pachy-menengitis externa ossificans; thickening internal table frontal bone; atheroma cerebral arteries; left obliterative pleuritis; atheroma of aorta; small white tumor left kidney.	5	145. 140	Extensive areas of cirrhosis occur, in which the glomeruli are fibroid and the tubes destroyed. Other situations show some connective tissue increase and atrophy of the glomeruli. Cloudy swelling of epithelium of tubules. A tumor about 5 m m in diameter, at lower border of cortex, consists of connective tissue. (Fibroma).
79	С	F		Primary dementia.	Slight cerebral atrophy; right hydrothorax; miliary tuberculosis of lungs. Pelvic adhesions.	7	107. 107	

MATTER STATES

PLATE No. 5.

Double Ureta. Case No. 70.

SYNOPSIS OF TABLE.

In 80 cases in which the lungs were examined 34 were tuber-

Calcareous and atheromatous degeneration of aorta in 25

Atheroma of basal vessels of brain in 12 cases.

Cystic degeneration of both kidneys in 9 cases.

Cystic degeneration of one kidney in 9 cases.

Heart lesions in 22 cases. Epithelioma of face, I case. Carcinoma of uterus, I case. Multiple sarcoma, I case.

Tumor of pons, (fibroid arachnoid), I case.

Of the 76 cases of insane subjects in which the kidneys were examined microscopically 56, or 73.83 per cent. showed changes considered pathological.

I wish, in closing, to express my appreciation of the liberality shown by the Board of Trustees in the equipment of the laboratory and of the uniform kind consideration shown me by our superintendent, whose sympathetic interest in my work has lightened its labors and been a constant source of encouragement.

My thanks are also due my assistant, Dr. J. W. Mobley, for

his faithful and efficient services.

Respectfully,

T. E. OERTEL, M. D. Pathologist.

Report of Steward.

STATE LUNATIC ASYLUM, Milledgeville, Ga., Aug. 31, 1897.

Dr. T. O. Powell, Superintendent.

Dear Sir: I have the honor to transmit through you, to our Board of Trustees, this, my report as steward, from September

1st, 1896 to September 1st, 1897.

Abstract "A" shows the balance brought forward from last fiscal year, the amount drawn from the State Treasurer for support and maintenance of the Institution, together with a classified statement of the disbursements; also the balance on hand to be carried forward to the next year.

Abstract "B" shows in detail the expenditures on account of subsistence.

Abstract "C" shows in detail the expenditures on account of clothing.

Abstract "D" shows in detail the expenditures on account of fuel and transportation.

Abstract "E" shows salaries paid to officers. Abstract "F" shows wages paid to employes.

Abstract "G" shows in detail the expenditures on account of incidental expenses.

Abstract "H" shows in detail the expenditures on account of medical supplies.

Abstract "I" shows in detail the expenditures on account of contingencies.

Abstract "J" shows in detail the expenditures on account of stationery and postage.

Abstract "K" shows in detail the expenditures of the balance of the special appropriation for heating detached buildings.

Abstract "L" shows in detail the expenditures of the balance

of the special appropriation for building brick wall.

Abstract "M" shows in detail the expenditures on account of special appropriation for a duplicate water main, together with the balance on hand carried forward to next year.

Abstract "N" shows the requisition for support and maintenance of the Institution drawn for the State Treasurer in their regular order.

Abstract "O" shows the average number of patients from 1873 to 1897, both included, together with the per capita per diem, and per annum.

Abstract "P" shows the cost of maintaining one patient by the year, month, week and day.

Our storekeeper, Mr. W. H. Hunter, reports stock on hand \$6,028.98.

Our apothecary, Dr. A. G. North, reports stock on hand \$812.30.

Our per capita is 33.11-100c.

By reference to the report of Mr. G. W. Hollenshead, assistant steward, you will find the results from garden, dairies, hog, etc. Our manner of purchasing supplies is still kept up, advertising for sealed proposals to furnish, and awarding to lowest bidder. All of my books, vouchers etc., have been regularly examined by the auditing committee of the Board of Trustees, found correct and approved.

Duplicate vouchers of the expenditures of the Institution have been forwarded monthly to His Excellency, the Governor, for file in the Executive Department, in accordance with law. Since the appropriation was made for the support and main-

tenance of the Institution for 1898, there has been a considerable advance in the cost of supplies, and I feel that we should have to practice rigid economy to care for the number of inmates we shall have next year; this, however, has always been our custom

We have steadily improved in the care and comforts of our unfortunates, and I am fully persuaded the management of our Institution will compare favorably with any similar Institution in the United States. With renewed expressions of gratitude for the confidence reposed in me by our Honorable Board of Trustees as well as yourself, I am yours

Very respectfully,

LUCIUS J. LAMAR.
Steward.

ABSTRACT "A."

Statement of Steward, State Lunatic Asylum, showing the balance brought forward, from last fiscal year, and all money received; also a classified statement of disbursements, from September 1st, 1896, to September 1st, 1897:

Report of Assistant Steward.

STATE LUNATIC ASYLUM, Milledgeville, Ga., Sept. 1st, 1897.

Mr. L. J. Lamar, Steward.

Dear Sir: I herewith hand you my report as assistant steward for the year beginning September 1st, 1896, and ending with August 31st, 1897, of the Old and New Dairys, Garden, and Pork, also statement of stock, wagons, etc., on hand September

1st, 1897.

I am afraid we are going to have another short crop of potatoes and turnips on account of the continued hot and dry weather, though we have planted a good many more than we had last year. We have built and opened the New Dairy during the past few months, began getting some milk July 6th and stopped buying all sweet milk the 10th of August. We built a cow house with fifty-two stalls, one double bran house, two large barns, and one three room house for the dairyman and his family. Also dug and walled with brick one well. We have also bought 29 cows, and 206 head of shoats, the cost of all of which is shown in my report. I hope to kill this winter from the shoats bought, and some raised, between thirty-five and forty thousand pounds of pork, and to make the New Dairy a success in every sense of the word.

Very respectfully,

GEO. W. HOLLINSHEAD,
Assistant Steward.

Report of Engineer.

STATE LUNATIC ASYLUM, Milledgeville, Ga., Sept. 1, 1897.

Dr. T. O. Powell, Superintendent, etc.

Dear Sir: I have the honor to submit herewith my annual report of the workings of this department from September 1st, 1896, to September 1st, 1897.

Respectfully,

T. H. DeSAUSSURE, Engineer.

IMPROVEMENTS.

RETAINING WALL.

With the unexpended portion of the appropriation for walls about the new building, remaining at the close of our last fiscal year, there has been built a retaining wall in front of that building with steps leading up to the level of the building from the terrace below.

DUPLICATE MAIN.

The duplicate water main from the waterworks for which a special appropriation was made at the last session of the legislature, has been laid. The length of this pipe is seven eights of a mile and the diameter of it, twelve inches. The Institution had outgrown the capacity of the old pipe line which was put in in 1884; and the forcing of sufficient water for the needs of the place through this small pipe increased the pressure per square inch at the pumps and in the pumping main from ninetytwo and one-half (921) pounds, which is the pressure at the waterworks due to the elevation of the Asylum above the pumping station; to one hundred and sixty (160) pounds. This increase of pressure meant an increase of friction on the pump and in the main and necessitated a greater expenditure of fuel and an increased liability to accident. Since the new main has been put in use, the pressure at the pumps has been reduced from one hundred and sixty (160) to ninety-five (95) pounds per square inch. Incidental to the laying of the duplicate main we have put a new brick and cement floor in the water tower. The old floor had been much undermined by rats, and had in other ways become broken and uneven.

FILTER.

An increased demand for water has necessitated some means of an increased supply; this has been met by constructing a sand filter in the bed of Camp Creek. The operation of this filter is very successful, and with the old one gives us an ample supply of good water for our present needs.

PAVING.

The pavement under main center building had become much worn and very uneven with its forty years of use. Many of the tile had become worn through to the earth beneath. Much of this has been taken up and new paving put down. In this work there has been used twenty-two thousand, five hundred (22,500) brick and tile.

REFRIGERATOR.

There has been built in the basement of the main center building, a large and commodious refrigerator with two compartments, one of which holds a supply of beef sufficient for one days consumption. The other compartment is for milk, butter and fruit. The entire refrigerator is lined throughout with zinc. There has also been built near the refrigerator an ice bex, holding fourteen hundred pounds. From this box the daily issues of ice is made.

LAUNDRY.

When the boiler which furnished steam for the wood working shop and laundry was moved into the new boiler house, mention of which was made in last year's report, there became vacant a brick building twenty-two (22) by twenty-eight (28) feet adjoining the laundry. Into this building has been put a floor on a level with the laundry floor, and the whole space divided up into bins into which the soiled clothes are placed as they are received daily from the wards.

There has also been placed in this annex a water closet with an automatic flushing tank for the inmates working in the laundry.

All the entrances to the laundry have been fitted with wooden lattice doors and all of the windows furnished with large mesh 'wire guards, in order that the building may be made safe for the care of patients, a large number of whom work daily at the ironing tables.

The outfit of the laundry has been increased by the addition of one thirty inch centrifugal extractor, two large star-shaped

ironing tables, each accommodating six ironers, two zinc-lined hopper trucks for wet clothes and four willow-ware basket trucks

HEATING APPARATUS.

The heating apparatus under the main building was put in in the infancy of heating buildings by steam in this country, and has been in operation for forty years. Its operation has always been unsatisfactory, its maintainance expensive and its use was extravagant in the consumption of steam for the return it gave

in warmth in the buildings.

We have undertaken during the past summer to remodel a part of this apparatus, putting it in more modern shape. While radiators have been put in only under the front part of the main building, and the west wing of the 3d ward, there has been a great deal of permanent work done which will suffice for the completed job of remodelling of the entire apparatus. Among which may be mentioned the excavation of a pump pit in the air duct just north of the boiler room, and the placing in it with all the necessary steam and return pipes, two 7 1-2 inch by 4 inch by 6 inch duplex automatic feed pumps and receivers. This pit is 24 feet by 8 feet and had to be dug down eight feet below the level of the air duct and the surrounding walls underpinned. A sump hole, covered with a cast iron ring and cover, and going down five feet below the level of the pit floor has been constructed. This is for the collection of any drip from the pumps and accidental water on the floor, such water to be raised to the surface level by a steam jet pump.

As a part of the permanent work there may be mentioned also the running of the main steam and return pipes; of the latter seven hundred and twenty feet has been run below the surface of the floor of the air duct at a depth varying from one foot to eight feet. Three hundred and twenty feet of this is through an open top brick trench, and four hundred feet goes under the surface; being laid inside of an eight inch terra cotta pipe and supported at intervals of ten feet on cast iron rollers. The balance of the return pipe is laid on the floor of the air duct.

The main steam pipe leaves the boiler room nine inches in diameter and runs both to the right and left, five hundred and twenty two feet each way, ending in four inch pipe at the junction of the third ward, with the center building.

HOT WATER APPARATUS.

Two of the four hot water tanks in the air duct which runs underground through the back yard to the building, have become worn out and are unfit for further use, and since the placing of a pump in the deep well, there has become a constant supply of exhaust steam which can be utilized in heating water. We have decided to remodel the apparatus which furnishes hot water to the main block of buildings—purchasing two 24x96 inch Berryman water heaters, and placing them above ground, and leading all of the exhaust pipes from the engine and pumps into them, thus utilizing the heat of the exhaust steam which would otherwise be wasted. Two of the four by eight-foot tanks now in use are in good condition and will be placed in cast iron cradles above the Berryman heaters to serve as circulation tanks or reservoirs for holding a supply of hot water. Much of this work has already been accomplished, and there remains alone the placing of the two large tanks in position and connecting the pipes to the heaters.

REPAIRS TO BUILDINGS.

The whole of the "Detached Building" for females has been overhauled and renovated. All of the plastering on the 17th ward, which had become very defective, has been knocked off and the entire ward replastered. This whole building has been put in thorough order; new floors and new cement rooms put in wherever needed and the whole building whitewashed and all of the wood work given two coats of paint. The porches of this building and also those of the "Detached Building" for males, have had new sills, pillars and floors put in and all of the wood work

given two coats of paint.

The 3rd female ward has also been repaired and prepared for use as a hospital ward. All of the paint work on this ward has been scraped and sand papered and the floors of the rooms relaid with selected rift pine flooring. The base boards of the rooms have been removed and the side walls plastered down to the floor, a small quarter round being laid on the floor where the plastering joins it. The old cement base board of the hallway has been torn out and a neat moulded top wooden base put in and painted. The room floors are varnished with Berry Bros. Liquid Granite Floor Finish, and all of the wood work painted with white enamel paint.

WATER MAIN.

There has been twelve hundred and ninety-six feet of four inch, and twenty-two hundred and forty feet of two inch cast iron pipe laid to the new dairy. The four inch pipe goes as far as a point opposite the hospital building, where it divides into two two-inch lines, one extending to the new and the other to

the old dairy. Provision is made at the end of the four inchr pipe to connect with the hospital building.

WORK ROOM FOR THE MATRON'S DEPARTMENT.

There has been fitted up in the basement under the Matron's office, a work room, and a store room for preserves, jellies, etc. One half of this room is latticed off and provided with ample shelving; the other part has a sink to which hot and cold water is run, and also eight small gas stoves for preserving.

ADDITION TO STOREHOUSE.

The increased population of the institution has made the store house which was erected in 1890 too small; and provision has been made for enlarging it; a contract having been let to J. W. McMillan, of Milledgeville, Ga., for extending it forty feet. This includes a basement story of the same length. The walls of this work are now up to the eaves and the building ready for the roof. The work will be completed in about six weeks.

WALLS.

There has been built in the back yard of the main building, a brick wall thirteen feet high and three hundred and eighty-four feet long, with a large double gate, and a door in it. This wall is for the purpose of cutting off that part of the grounds used as a recreating yard by the female patients from that used by the males, and is in the line of permanent improvement, taking, as it does, the place of an old wooden fence which was insecure and much out of repair.

There has also been put up, a wall in the rear of the building for convalescent males. This wall is thirteen feet high and six hundred and forty-three feet long—forming a recreating yard in the rear of that building for the use of patients.

There is also in process of erection a similar wall in the rear of the building for convalescent females, of the same height and five hundred and eighty-six feet long.

ADDITION TO LABORATORY.

There has been a brick annex fifteen feet nine inches wide by forty feet long, built to the Pathologist's laboratory. This building was put up at the junction of the back yard wall with the laboratory; in this way utilizing a part of the yard wall and a part of one side of the laboratory in its construction. The annex is intended for photographic purposes in connection with the

pathologist's work, and is provided with a dark room, sink, hot and cold water, gas and apparatus for cooling water for developing negatives; also with the necessary tables, shelving, etc.

CARPENTER'S WORK.

Besides doing a large amount of "ordinary repair about the institution during the year the carpenters have made the following articles:

- 1 Bread table for kitchen
- 1 Floor and flower stand in hot house.
- 1 Large voucher box.
- 8 Tables at laboratory.
- 1 Bookcase for laboratory.
- 3 Steam pipes through yard boxed.
- 1 Frame for drying lace curtains.
- 2 Star broning tables for laundry.
- 2 Trucks for wet clothes in laundry.
- 15 Lock-boxes over electric bells
- 4 Large cupboards.
- 2 Hinged clothes-racks for laundry.
- 6 Lattice doors.
- 1 Work bench for pipe cutter.
- 1 Refrigerator.
- 1 Ice box.
- 1 Wooden sink.
- I Box for refrigerating apparatus.
- 40 Dining-room benches.
- 17 Lattice benches.
- 4 Door frames.
- 1 Transom sash.
- 3 Double gates, solid.
- 8 Gattes latitice.
- 6 Pairs of outside steps.

- 1 Lattice partition.
- 4 Well curbs.
- 3 Ladders.
- 35 Rooms floored.
- 19 Clothes stalls in laundry.
- 38 Wire guards.
- 16 Sash.
- 14 Pannels of fencing.
- 109 Shuck mops.
 - 1 Water trough for stable.
- 592 Beadsteads.
- 236 Coffins.
- 20 Boxes for shipping coffins.
- 900 Cuntain rods.
- 8 Sets of shelving.
- 1 Commode.
- 24 Cone tops.
- 14 Bakers' bread paddles.
- 12 Clothes racks.
- 12 Voucher boxes.
- 2 Tables for sinks.
- 4 Ox bows.
- 2 Closets partitioned off from hall.
- 14 Platforms for bath tubs.

Report of Matron.

STATE LUNATIC ASYLUM, Milledgeville, Ga., Sept. 1, 1897.

Dr. T. O. Powell, Superintendent, etc.

Permit me to submit the enclosed as my report for the year ending Sept. 1st, 1897. I would add that repairing has been done for the Institution and all scraps and remnants have been put to a good use, and have been properly accounted for through storekeeper's office.

All of which is respectfully submitted,

MRS. J. M. DARNELL, Matron.

50 copies Presbyterian, from Miss Abby Orme. 165 copies Churchman, from Miss Abby Orme.

32 copies Puck and Judge, from Miss Abby Orme.

Respectfully, ROBT. A. TRIPPE, Librarian.

Report of Chaplain.

STATE LUNATIC ASYLUM, Milledgeville, Ga., September, 1897.

Dr. T. O. Powell, Superintendent, etc.

Dear Sir: Religious services have been held regularly on Thursday and Sunday afternoons during the year. The con-

duct could hardly have been better.

Judging from the large attendance, the interest manifested and the many kind expressions, these services have been greatly enjoyed by the patients. We have been benefited and feel that many hearts have been encouraged as they have been referred to a merciful God. The music so well and faithfully cared for by Mrs. West has been especially enjoyed—in fact it is in this part of the service that the patients join most heartily. We have buried the dead and been ready at all times to visit the sick and others when thought advisable.

We pray God's richest blessings upon the Institution that

should be nearest the heart of our people.

Very respectfully,

JNO. A. WRAY, Chaplain.
